justonesui ($ONE)

A community owned memecoin on Sui mainnet. Version 1.0, September 2026.

What $ONE is

justonesui ($ONE) is a memecoin on Sui mainnet, owned and run by its holders. There is no company behind it, no founding team holding an allocation and no treasury of locked tokens waiting on a vesting schedule. Nobody holds a position the public cannot see on chain.

It is a memecoin. It does not claim a product, a yield or a use beyond being traded and held by the people who want to hold it.

How it started

$ONE launched on SuiPump on 25 August 2026. The account that promoted it presented as a former Mysten Labs research intern and a Sui Network ambassador. 715 wallets sent 4,767 SUI to a presale on the strength of those credentials.

At 01:17 UTC on launch day the operator minted 553,388,273 tokens to himself inside the launch transaction itself, before anyone else could buy. At 03:22 UTC he sold all of them, then moved the proceeds through a zkSend link to break the trail. Two hours, start to finish. He then demanded 200 USDC from the community in exchange for not defacing the token's DexScreener listing.

Every transaction in that paragraph is public. They are listed with their digests at justonesui.com/evidence.

How it is run now

The community took the project over the same day. 558 of the affected wallets were made whole out of one holder's own position, without a vote and without asking for anything back. The liquidity position the operator held, 42.79% of the ONE/SUI pool at the time of transfer, was signed over to the community rather than paid for. It has not been withdrawn since.

The project has no treasury to spend and no payroll. What it has is a liquidity position that earns trading fees, a website, and the people who stayed.

Token details

NAME	justonesui
TICKER	ONE
NETWORK	Sui mainnet
CONTRACT	0xaaffd090b57fcdcf293f7e7ec59c119acc910eeb5fc4aadfb4185fa56b6a2cb5::suipump::SUIPUMP
DECIMALS	6
LAUNCHED	25 August 2026 Launched on SuiPump, graduated to a Cetus concentrated liquidity pool.
PAIR	ONE / SUI Pool 0x1f30ac740fec626467ac825121314185a9a2feacd88185d70cea7e092d07fd3a
INITIAL SUPPLY	1,000,000,000 Fixed at launch. The live figure is published at justonesui.com/treasury.

Supply and distribution

The supply was fixed at one billion $ONE at launch and can only go down.

- **Team allocation: none.** There is no team wallet, no vesting contract and no unlock schedule. There is nothing scheduled to enter the market.
- **Mint authority: locked.** The capability that would allow new $ONE to be created is held inside the launch contract and cannot be called by anyone, including the community. The supply cannot be inflated.
- **Supply only decreases.** Fees earned by the community held liquidity position are used to buy $ONE on the open market and send it to the zero address, where it cannot be recovered. This runs continuously and every burn transaction is public.
- **Presale contributors were repaid.** 558 wallets each received 111,000 $ONE from an existing holder's own supply. No new tokens were created to do it.

Because burns happen continuously, any supply figure printed in a document is out of date the day it is written. justonesui.com/treasury reads total supply, the dead address balance and circulating supply straight off Sui mainnet when the page loads.

Liquidity

$ONE trades against SUI in a Cetus concentrated liquidity pool. A position representing 42.79% of that pool at the time of transfer is held by the community, signed over by the original operator and not withdrawn since. A concentrated position's share of a pool moves with the market, so treat that figure as the size at transfer rather than a live reading. The fees the position earns are what funds the burns described above. The pool address is in the table on this page and the live chart is on DexScreener.

Roadmap

This is a memecoin. The roadmap below is a statement of what has been built and what is being worked on, not a promise of price or return.

Phase 1, complete

- 558 affected wallets made whole
- Liquidity position recovered and held by the community
- Continuous fee burn running
- Full transaction by transaction record published on chain and on the site

Phase 2, in progress

- CoinGecko and CoinMarketCap listings
- Community bounties paid in $ONE
- On-chain games live on Sui mainnet
- A buy guide a first-time buyer can follow end to end

Phase 3, next

- Deeper liquidity
- Collaborations with other projects in the Sui ecosystem
- Merch
- More for holders to do on chain

Risks

$ONE is a memecoin with no utility and no revenue. There is no team obligated to maintain it and no entity standing behind its value. It can lose all of its value and go to zero.

Anyone considering holding it should understand the following:

- Price is driven entirely by open market trading. There is no floor and no buyback obligation.
- Liquidity is concentrated in a single pool. A large sale can move the price sharply.
- The project is run by volunteers. Nobody is contractually required to keep working on it.
- A counterfeit token exists on Sui using the same name and symbol. It has 9 decimals rather than 6 and a different package address. Always verify the full contract address printed in this document before trading.
- Nothing in this document is financial advice or an offer to sell a security.
